

Nyle Shah

Lead ServiceNow Developer & Admin

Spring, TX, 77379 || 281-603-3174 || nyleshah03@gmail.com
https://www.linkedin.com/in/nyle-shah/

Professional Summary:

- 13 years of IT industry experience, including 12 years of hands-on expertise in ServiceNow development, administration, implementation, and platform customization.
- Strong expertise in ITSM, ITOM, HRSD, CSM, or other major ServiceNow modules.
- Advanced JavaScript skills with hands-on experience in Business Rules, Script Includes, Client Scripts, UI Actions, UI Policies, and Glide APIs.
- Experience leading full-lifecycle development, from technical discovery and requirements gathering through design, development, testing, deployment, and production support.
- Strong understanding of configuration versus customization, upgrade-safe development, reusable components, and platform best practices.
- Experience establishing coding standards, conducting peer code reviews, mentoring developers, and promoting maintainable solutions.
- Experience designing application architectures, technical specifications, data models, and scalable enterprise solutions.
- Strong integration experience using REST APIs, SOAP web services, IntegrationHub, and third-party enterprise applications.
- Ability to troubleshoot integration failures, authentication issues, data mapping errors, and synchronization problems across distributed systems.
- Experience improving system reliability, scalability, performance, and data integrity across business-critical environments.
- Ability to evaluate existing architecture and recommend improvements that reduce technical debt and simplify long-term maintenance.
- Hands-on experience configuring Access Control Lists (ACLs), role-based access controls, encryption, and identity management.
- Experience implementing secure integrations and protecting sensitive enterprise data.
- Ability to collaborate with security, privacy, and compliance teams on application reviews and platform governance.
- Experience maintaining appropriate access controls and security configurations across development, test, and production environments.
- Experience with Agile development, technical design reviews, release planning, and SDLC governance.
- Hands-on experience supporting CI/CD practices, automated deployments, source control, and release management.
- Ability to coordinate unit testing, integration testing, system testing, and UAT before production releases.
- Experience maintaining technical documentation, development standards, and deployment procedures.
- Strong root-cause analysis skills, with an emphasis on permanent fixes rather than temporary workarounds.
- Experience resolving complex production incidents across ServiceNow, APIs, enterprise applications, and distributed systems.
- Ability to identify root causes, implement corrective actions, and prevent recurring incidents.
- Experience communicating technical issues and resolutions to business users, leadership, vendors, and technical teams.
- Proven ability to work independently, mentor junior developers, and influence technical decisions.

Certifications:

- ServiceNow – Certified System Administrator (CSA)
- ServiceNow – Certified Application Developer (CAD)
- ServiceNow Certified Implementation Specialist – ITSM (CIS – ITSM)
- Certified Implementation Specialist – Data Foundations (CMDB and CSDM) (CIS-DF (CMDB and CSDM))
- ITIL V4

Professional Experience

Deloitte
Lead ServiceNow Developer/Admin Aug 2022 – Present

- Integrated ServiceNow ITSM with enterprise applications including JIRA, Salesforce, and Slack, enabling automated workflows and seamless cross-platform collaboration.
- Implemented ITOM Discovery and Event Management solutions to improve infrastructure visibility, automate CI identification, and proactively detect operational issues.
- Developed and customized Service Catalog items within ITSM using JavaScript, HTML, and Glide APIs to support dynamic request fulfillment processes.
- Implemented ServiceNow Workplace Service Delivery (WSD) capabilities to manage workplace services, employee requests, and facility-related operations.
- Developed WSD reports and dashboards to monitor space utilization, reservation trends, workplace requests, and service delivery performance.
- Implemented ServiceNow Now Assist capabilities to enhance agent productivity, automate routine tasks, and improve user experiences across enterprise workflows.
- Configured Now Assist features to generate case summaries, summarize interactions, and provide contextual recommendations for faster issue resolution.
- Integrated Now Assist with existing ServiceNow workflows to streamline knowledge discovery, case handling, and service desk operations.
- Configured ServiceNow ITOM Service Mapping to visualize application service dependencies and establish relationships between business services, applications, and infrastructure components.
- Integrated ITOM with enterprise infrastructure monitoring tools to centralize operational data and improve visibility into infrastructure health.
- Optimized ITOM configurations and troubleshooting processes to resolve CMDB data discrepancies and improve configuration data reliability.
- Enhanced Service Portal solutions for ITSM and HRSD using AngularJS, HTML, and CSS, delivering responsive interfaces and improved self-service capabilities.
- Designed and implemented Transform Maps to populate CMDB through ITOM integrations while ensuring data normalization, consistency, and configuration data integrity.
- Automated HAM and SAM lifecycle processes within ITAM, streamlining hardware and software asset management while aligning with ITIL best practices.
- Configured SAM workflows integrated with Service Catalog, ITSM, and CMDB to automate software requests, approvals, entitlement management, and fulfillment activities.
- Designed normalization and reconciliation processes across SAM and CMDB, improving software asset accuracy, license compliance, and reporting visibility.
- Built and enhanced CSM and Service Portal solutions to provide an improved customer experience, efficient case management, and intuitive self-service functionality.
- Integrated CSM with ITSM and CMDB to establish unified case tracking, service visibility, and automated business workflows.

- Developed Client Scripts, UI Policies, and UI Actions to simplify ITSM processes and optimize Service Catalog user interactions.
- Customized CSM Configurable Workspace to streamline agent workflows and provide centralized access to customer records, case details, and related activities.
- Integrated CSM with external CRM platforms using REST APIs, SOAP web services, and IntegrationHub to synchronize customer and service data.
- Configured LDAP and SAML-based SSO integrations across ITSM and HRSD, enabling secure authentication and centralized user provisioning.
- Implemented ITAM and SAM solutions to automate software asset lifecycle management, entitlement tracking, and license compliance reporting.
- Improved CMDB health and CSDM alignment by optimizing ITOM Discovery, CI relationship mapping, and configuration governance processes.
- Supported Service Mapping implementations within ITOM to establish service-aware CMDB relationships and strengthen operational visibility.
- Implemented Third-Party Risk Management (TPRM) capabilities to streamline vendor onboarding, risk assessments, and compliance evaluations.
- Integrated GRC, IRM, CMDB, and SecOps to deliver continuous risk monitoring, automated control validation, and enhanced compliance visibility.
- Delivered Strategic Portfolio Management (SPM) solutions covering Demand Management, Project Portfolio Management (PPM), and Resource Management.
- Automated governance and approval workflows across GRC, IRM, and SPM to improve operational efficiency and compliance tracking.
- Implemented FSO and FSM integrations to streamline work order processing, field operations, technician scheduling, and service execution.
- Configured TPRM within GRC and IRM to automate vendor risk scoring, due diligence processes, and ongoing compliance monitoring.
- Implemented HAM workflows integrated with ITAM, CMDB, and Procurement to automate hardware asset lifecycle activities from acquisition through retirement.
- Configured Incident Management, Problem Management, and Change Management workflows within ITSM while aligning processes with ITIL best practices.
- Designed and developed AI Development Agents using OpenAI APIs, LangChain, and Python/JavaScript to automate business processes, code generation, and knowledge retrieval.
- Implemented HAM workflows integrated with ITAM, CMDB, and Procurement to automate hardware asset lifecycle activities from acquisition through retirement.
- Implemented monitoring and logging for AI Development Agents to track API usage, latency, response quality, and operational metrics.
- Configured HAM with Discovery, Service Mapping, and CMDB to maintain accurate asset ownership, lifecycle status, and compliance reporting.
- Built Retrieval-Augmented Generation (RAG) pipelines by integrating vector databases with enterprise documentation to deliver context-aware and accurate AI responses.
- Developed AI-powered chatbots and virtual assistants capable of handling IT support, knowledge management, and service request automation using natural language processing.
- Integrated AI Development Agents with REST APIs, ServiceNow, Jira, GitHub, Slack, and Microsoft Teams to automate ticket management and cross-platform workflows.
- Configured AIOps dashboards and ITOM Health analytics to support predictive monitoring, event correlation, and proactive service management.
- Enabled multi-source telemetry ingestion for AIOps using AWS, Azure, and GCP, delivering unified observability across enterprise environments.

- Configured Vendor Risk Management within TPRM and IRM to automate third-party onboarding, continuous assessments, and compliance tracking.
- Implemented Policy Exception Management in GRC and IRM, providing structured approvals, exception tracking, and audit visibility.
- Enhanced SPM and PPM workflows by integrating financial planning, resource allocation, and demand prioritization into project execution.
- Integrated SecOps modules including Security Incident Response (SIR) and Vulnerability Response (VR) with GRC and IRM to enable risk-based incident and vulnerability management.
- Designed and automated SAM Pro and HAM Pro normalization and reconciliation processes to improve software license accuracy, compliance, and audit readiness.
- Optimized HAM lifecycle workflows covering procurement, assignment, transfers, maintenance, and retirement within ITAM.
- Implemented Data Certification and Attestation workflows across CMDB and GRC to strengthen data governance and audit compliance.
- Configured Advanced Work Assignment (AWA) for ITSM and HRSD, improving intelligent routing, workload balancing, and agent productivity.

Adobe
Sr. ServiceNow Admin/Developer April 2019 – July 2022

- Streamlined ITAM, HAM, and SAM asset lifecycle processes to strengthen governance, software compliance, and enterprise asset visibility.
- Developed custom applications using ServiceNow App Engine to automate business processes and address organization-specific workflow requirements.
- Configured ITAM solutions for hardware and software inventory, procurement automation, asset tracking, and lifecycle management.
- Supported App Engine application testing, debugging, and deployment to ensure solution quality, maintainability, and alignment with ServiceNow development best practices.
- Enhanced ITOM CMDB accuracy by leveraging Discovery and automated CI relationship mapping to provide reliable infrastructure insights.
- Configured ServiceNow Field Service Management (FSM) work order templates, task types, and service processes to support efficient field service operations.
- Created ITAM dashboards and operational reports to monitor asset utilization, compliance status, lifecycle metrics, and inventory health.
- Supported ITOM platform enhancements, integration testing, and deployment activities to maintain operational stability and align solutions with ServiceNow best practices.
- Integrated IAM capabilities with ServiceNow ITSM and HRSD using LDAP, SSO, and SAML authentication for secure identity and access management.
- Supported CSM enhancements through requirements analysis, functional testing, defect resolution, and production deployment.
- Implemented ITOM Service Mapping to establish relationships between CMDB configuration items and business services, improving impact analysis and service visibility.
- Customized HRSD workflows for employee onboarding, case management, and self-service requests, improving operational efficiency and user satisfaction.
- Created AI-assisted code review and documentation tools that generated unit tests, technical documentation, and implementation recommendations.
- Integrated vector databases and embedding models to support semantic search, enterprise knowledge retrieval, and intelligent document analysis.
- Installed and maintained MID Servers to support ITOM Discovery, Service Mapping, IntegrationHub, and enterprise integrations across hybrid infrastructures.
- Tuned MID Server connectivity and performance to ensure reliable Discovery execution, CMDB synchronization, and integration processing.

- Utilized Now Assist within ITSM to accelerate incident resolution, enhance knowledge recommendations, and improve agent productivity.
- Enabled GenAI capabilities through Now Assist, ITSM, and Knowledge Management to provide intelligent search, content generation, and workflow assistance.
- Configured Employee Service Center within HRSD to centralize employee requests and deliver an enhanced self-service experience.
- Developed custom HRSD Service Portal widgets, reusable components, themes, and branding elements to improve usability and employee engagement.
- Integrated HRSD with Workday and other enterprise HR applications to automate employee profile synchronization and lifecycle event processing.
- Designed HRSD Knowledge Management solutions to expand employee self-service capabilities while reducing support desk dependency.
- Automated HRSD approval workflows supporting onboarding, offboarding, employee transfers, and lifecycle management processes.
- Built HRSD dashboards and analytical reports providing real-time visibility into case volumes, SLA compliance, and service delivery performance.
- Integrated ITAM with procurement platforms to automate asset acquisition, vendor management, and inventory lifecycle operations.
- Performed ITAM audits and CMDB validation activities to improve data quality, governance standards, and regulatory compliance.
- Configured SLA definitions and escalation rules within HRSD to monitor employee support commitments and service performance.
- Designed automated ITOM Discovery schedules to continuously maintain CMDB accuracy and ITAM asset consistency.
- Integrated Performance Analytics with HRSD and ITAM to deliver KPI dashboards and actionable operational insights.
- Developed executive reporting dashboards using Power BI and Kibana by combining ServiceNow HRSD and ITAM data sources.
- Strengthened platform security by implementing IAM integrations, ACL configurations, and role-based access control (RBAC) across multiple ServiceNow modules.
- Enhanced HRSD Virtual Agent capabilities to automate employee inquiries, increase self-service adoption, and reduce case volume.
- Maintained CMDB CI relationships aligned with CSDM standards to improve dependency mapping, service visibility, and impact analysis.
- Configured Strategic Portfolio Management (SPM/ITBM) modules including PPM, Demand Management, and Resource Management to support enterprise portfolio planning.

Bank of America
ServiceNow Developer Nov 2016 – April 2019

- Configured and enhanced ServiceNow GRC modules including Risk Management, Policy and Compliance, and Audit Management to strengthen governance processes and support regulatory compliance initiatives.
- Designed and implemented SecOps capabilities including Security Incident Response (SIR) and Vulnerability Response (VR), improving security incident handling, remediation workflows, and risk reduction.
- Enhanced CMDB within ITOM by leveraging automated imports, Transform Maps, and CI relationship mapping to improve Security Operations visibility and enterprise risk analysis.
- Integrated ServiceNow with external security and vulnerability management platforms using REST and SOAP APIs to enable automated data exchange and threat intelligence synchronization.
- Built Performance Analytics dashboards for Integrated Risk Management (IRM), providing real-time insights into compliance status, risk exposure, and audit progress.
- Automated evidence collection and compliance reporting within GRC Policy and Compliance, increasing audit efficiency while reducing manual documentation efforts.

- Configured SLA definitions across SecOps and IRM modules to ensure timely security response, risk remediation, and compliance with organizational standards.
- Designed approval workflows and automated policy exception processes within GRC and IRM to improve governance controls and policy lifecycle management.
- Customized notification templates using Jelly scripting to deliver automated alerts for security incidents, compliance exceptions, and enterprise risk events.
- Utilized ITSM Problem Management integrated with GRC and IRM to perform root cause analysis, identify recurring issues, and implement preventive controls.
- Created and maintained ITSM Knowledge Management articles covering security procedures, compliance requirements, operational standards, and risk mitigation practices.
- Configured ACLs and security policies across GRC, CMDB, and ITSM modules to enforce role-based access control, data protection, and regulatory compliance.
- Implemented LDAP, Single Sign-On (SSO), and Multi-Factor Authentication (MFA) solutions to provide secure authentication and centralized user access across ServiceNow environments.
- Enhanced Vulnerability Response (VR) by integrating external vulnerability scanners to automate vulnerability ingestion, prioritization, and remediation tracking.
- Implemented ITAM and HAM workflows aligned with GRC policies to support asset classification, lifecycle governance, and risk-based asset management.
- Developed and customized UI Actions, UI Pages, UI Policies, and Client Scripts to enhance user experience and enforce business logic across ITSM applications.
- Integrated CMDB (ITOM) with external Discovery solutions to improve Configuration Item accuracy, service visibility, and CI relationship management.
- Implemented ITOM Service Mapping to establish dynamic relationships between business services, applications, and supporting infrastructure components.
- Automated CMDB population using Import Sets, Transform Maps, and Data Sources, ensuring consistent configuration data and improved data quality.
- Designed HTML and Jelly-based email templates to support ITSM notifications, workflow communications, and automated approval processes.
- Built and enhanced Performance Analytics dashboards to monitor ITSM KPIs, SLA performance, operational trends, and service delivery metrics.
- Configured MID Servers and ITOM Discovery to automate infrastructure scanning, Configuration Item identification, and enterprise asset visibility.
- Supported CSM enhancements through requirements analysis, functional testing, defect resolution, and production deployment.
- Streamlined ITAM processes by automating HAM and SAM lifecycle workflows, improving asset governance, compliance tracking, and inventory management.
- Developed ITOM Service Mapping solutions to establish business service dependencies, improve operational visibility, and strengthen impact and risk analysis.
- Automated SecOps and GRC business processes using Glide scripting, Flow Designer, and scheduled jobs to streamline security operations and improve process consistency.

Red Horse Corporation
Java Script Developer Feb 2015 – Oct 2016

- Developed enterprise web applications using Java, J2EE, Struts, and Hibernate, delivering scalable, high-performance solutions for business-critical applications.
- Built RESTful and SOAP web services to integrate enterprise applications with external systems, ensuring secure and reliable data exchange.
- Designed responsive user interfaces using JavaScript, HTML5, CSS3, AJAX, Bootstrap, and jQuery to improve usability and application performance.
- Developed reusable Java components and business services using EJB, following object-oriented design principles and modular architecture.

- Automated application build and deployment processes using ANT, improving release consistency across development, QA, and production environments.
- Created and executed JUnit test cases to validate business logic, increase code coverage, and maintain application quality.
- Deployed, configured, and supported Java applications on JBoss Application Server while monitoring performance and resolving production issues.
- Optimized SQL queries and collaborated with database teams to improve schema design, application performance, and data retrieval efficiency.
- Designed modular and reusable application frameworks to simplify maintenance, enhance scalability, and support future enhancements.
- Performed peer code reviews, implemented coding standards, and participated in design discussions to improve overall application quality and maintainability.
- Developed client-side functionality using JavaScript, jQuery, AJAX, HTML, and CSS to deliver interactive, cross-browser compatible web applications.
- Implemented DOM manipulation and event-driven programming techniques in JavaScript to create dynamic user interfaces and improve user experience.
- Built reusable JavaScript libraries and utility functions to reduce code duplication and standardize front-end development practices.
- Worked with JSON and XML data formats to exchange information between JavaScript front-end components and Java-based backend services.
- Participated in requirement analysis, technical design, development, testing, and deployment phases following Agile and SDLC methodologies.
- Configured logging and monitoring frameworks to track application performance metrics and support troubleshooting and diagnostics.
- Implemented authentication and authorization mechanisms using industry security standards to ensure secure access control.
- Optimized application performance by profiling code execution paths and improving inefficient processing logic.
- Used CVS version control for collaborative development, version tracking, and source code management.
- Gathered and analyzed functional requirements by collaborating closely with business analysts and stakeholders.
- Implemented AJAX-based dynamic content loading to enhance application responsiveness and user experience.
- Designed multi-tier architectures to support distributed system functionality and separation of concerns.
- Enhanced UI components to meet accessibility and usability standards, improving user engagement.
- Automated build and deployment pipelines to support CI/CD processes and faster release cycles.

Education:

- Bachelors of Science in Human Sciences | Texas Tech University
